Deep Linking

iPaaS and ESB

Integration Challenges

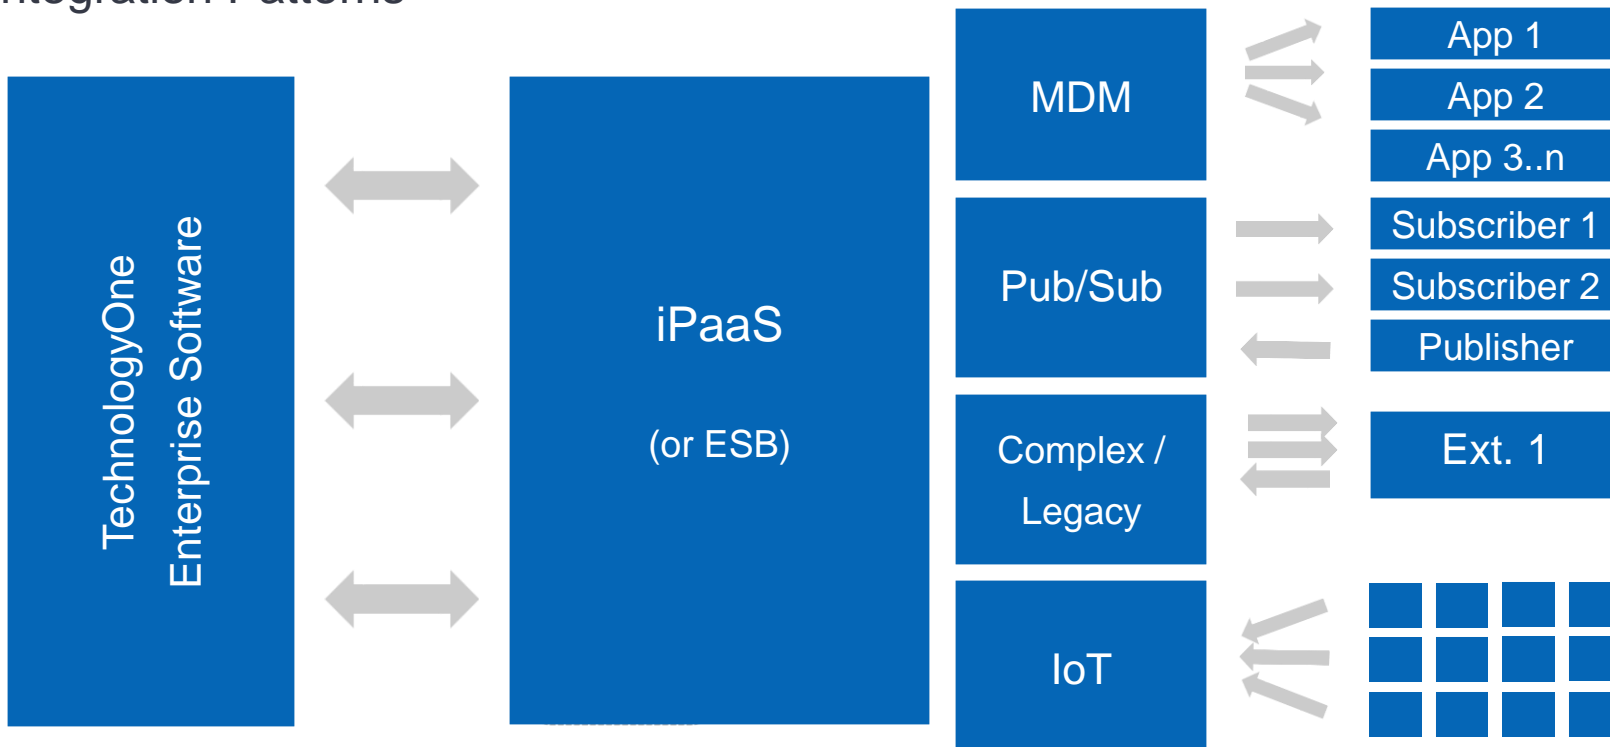

Other Systems				
SCADA	Network Design	Drawing Management	Engineering Collaboration	Environment Sust. Mgmt
Operational Monitoring	Contractor Systems	Other Service Provider Systems	Vegetation Management	External Reporting

- Propagating master records
- Supplier & Service provider system integration
- Some complex external interfaces and API's
- Legacy or bespoke systems integration
- 'Cloud to cloud' and 'cloud to on-premises'
- Increasing number of devices and Apps
- Interface change management

iPaaS and ESB

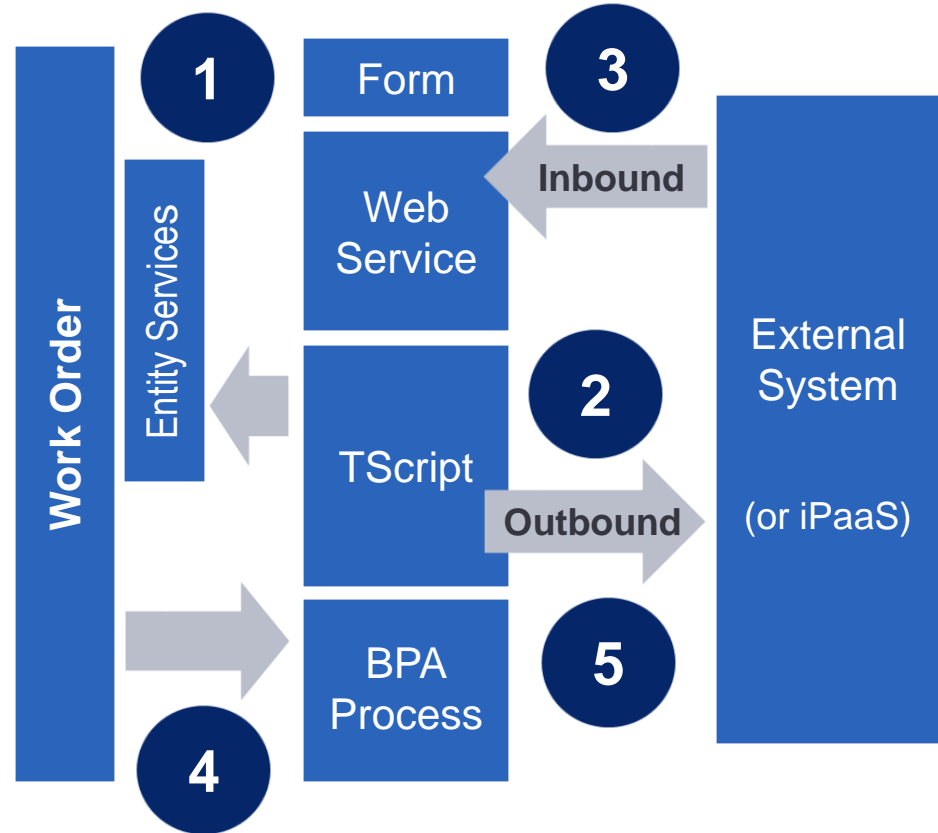

Integration Patterns

OneWater example

Use case...

- **Inbound:** Ci Anywhere web service to create a Work Order for SCADA Alarm
 - Direct call to entity service or indirect using a forms based web service (to simplify request)
- **Outbound:** call to external web service when a relevant Work Order is updated
 - Leverages BPA process integration to enable further extension and automation

Configuration steps ...

Inbound Interface:

- Create a Form

1

- Add a TScript

2

- Expose a Web Service

3

Outbound Call to Web Service Endpoint

Integration Futures

On the roadmap ...

- OAUTH for CiA Web Services (planned for 2018B)
- Ci A ETL (planned for 2018B)
- Additional Entity Services (each release)

Already delivered ...

- Trigger ETL processes via Ci A Web Services
- Create ETL step to read Ci A Analysers and Business Views
- Add TScripts to existing Ci Workflows
- BPA Forms with Classic Ci Workflow
